LEARN TO PREP

This enjoyable, exciting practical course takes the mystery out of Digital Dentistry.. Clarifying whats different to traditional impression / temp / Lab based care, you will both understand what you need to change in your technique, and what materials you should modernise to.

Participants will be shown both theory and practical applications of CAD/CAM care of not just CEREC, and will immediately be able to incorporate this in their daily work. This is an education, not a Sales Event.

DR CRAIG CAMPBELL

BDS(OTAGO) NZSSM

Establishing his practice at 23, Craig has continuously incorporated the lessons of Clinical Experience.

His CEREC CAD/CAM journey began 3,500 restorations ago in 2003.

As New Zealand's Key Opinion Leader for DentsplySirona, Craig will bring you a balance of Academia, incredible Clinical Experience / Cases as well as a passion that is limitless for effective clinical care.

COURSE SUMMARY

- CEREC LEVEL 1 & 2

These are clinically orientated 2- day courses. From the Academic literature about Digital Scanners, and Margin accuracy, to Cementation and Bonding technique, Module 1 & 2 are intended for both those familiar with Digital Dentistry, but also those for whom PFM / Gold provides comfort.

Modern Workflow allows Chairside Zirconia to replace the traditional workflow, without the need to change your cementation workflow.

While Module 1 teaches Posteriors, Quadrants and Bridgework, Module 2 incorporates Anterior smile aesthetics into the form and shape of restorations that allow dentists to obtain a skill set that will allow confidence with many materials in all positions of the mouth.

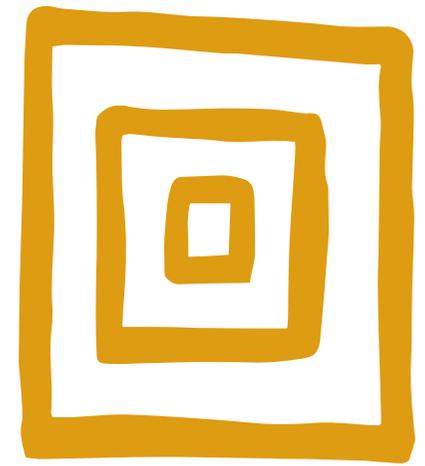

INSTITUTE OF DIGITAL PROS

Established in 2018, with an intention of helping clinicians into Digital Prosthodontics, this is the brainchild of Dr Craig Campbell.

We provide Courses and Learning Experiences intended to allow everyday Dentists to upskill their understanding of the progression from traditional Prosthodontics to Current Digital Environments.

University education will always provide the basics, but beyond this it is difficult to access balanced clinical education which incorporates current literature. This is the purpose for which the Institute of Digital Prosthodontics serves.
